## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 2, and 4-10, drawn to a system or automatic transmission including a lockup clutch and lockup control valve or the method of controlling hydraulic pressure in a transmission having a lockup clutch and lockup control valve, classified in class 192, subclass 3.3.
- II. Claim 3, drawn to a lockup control valve, *per se*, classified in class 137, subclass 487.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because certain of the combination claims do not require that the control valve have a spool. The subcombination has separate utility such as in a transmission that does not have a control unit that determines torque and controls signal pressure in accordance with torque.

Art Unit: 3681

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1:143).
